

## PHYSICAL SCIENCE, Associate in Science Degree - 3076

Science Department

CIP Code: 40.0101

The Physical Science AS degree provides students with the firm foundation in mathematics, science, and liberal arts necessary to transfer to and succeed in a baccalaureate degree program in astronomy, geology, meteorology, physics, and physical science. This program offers two tracks for the Physical Science AS degree: **Geology** or a **General Physical Science**. The **Geology Track** is for students intending to go on to degrees in the Geology or Environmental Science fields. The **General Physical Science Track** is for students intending to go on to degrees in Physics, Astronomy, Meteorology, or Physical Science. With appropriate further education, graduates may find jobs in astronomical research and/or planetarium operations (astronomy), the petroleum industry, the mining industry, or within a government agency (geology). They may also find employment at the National Weather Service as a weather researcher, or broadcasting (meteorology); within research and development at a university or in private industry, at a national laboratory, inspection, testing, and quality control, or other production-related jobs (physics); or as an environmental consultant or lawyer. Since the requirements of senior institutions and their degree programs vary widely, it is recommended that students choose an intended transfer institution as soon as possible and carefully align their course sequence with the program described in that institution's catalog. The entire program can be completed at the Harrisburg Campus through on-campus/in-person instruction. The *General Physical Science track* may be completed at the Lancaster Campus through on-campus/in-person instruction and at the York Campus through various modalities (e.g., on-campus/in-person instruction, hybrid, synchronous remote instruction and/or asynchronous instruction). The *Geology track* may be completed at the Lancaster and York campuses through various modalities (e.g., on-campus/in-person instruction, hybrid, synchronous remote instruction and/or asynchronous instruction). **Please note:** Students completing the program at the York Campus will need to take a few of their required courses in-person at the Harrisburg or Lancaster campuses.

### Transfer Opportunities

This transfer curriculum is provided as a guide for students planning to transfer to a baccalaureate degree granting institution. With appropriate further education, graduates may find jobs in astronomical research and/or planetarium operations (astronomy), the petroleum industry, the mining industry, or within a government agency (geology). They may also find employment at the National Weather Service as a weather researcher, or broadcasting (meteorology); within research and development at a university or in private industry, at a national laboratory, inspection, testing, and quality control, or other production-related jobs (physics); or as an environmental consultant or lawyer.

### Competency Profile

This curriculum is designed to prepare graduates of the program to:

- Transfer to and succeed in a baccalaureate program
- Ability to apply scientific principles and concepts including the scientific method to a variety of problems and situation
- Knowledge of scientific methods accomplishments and how they affect technology, politics and society
- Demonstrate computer literacy in data manipulation, mining, and analysis
- Perform technical work in a typical laboratory while following appropriate safety procedures
- Effectively communicate results both orally and through written reports
- Demonstrate information literacy by appropriately vetting online information sources for truthfulness and scientific validity
